Cleaning Instructions

To keep your fabric looking nice, brush off dirt and wipe up spills soon after a stain occurs. Cleaning spills and stains quickly should make them easier to remove. It is sometimes necessary to repeat these cleaning instructions for stubborn stains.

Stain	Recommended Cleaning Process
Water Based Stains <i>(i.e. Wine, Milk, Juice, Coffee, Tea, Gatorade, Ketchup)</i>	<ol style="list-style-type: none">1 Blot the area with a clean soft cloth to remove as much excess liquid or stain material as possible. Be sure not to rub.2 Add ¼ tsp of dishwashing liquid per 1 cup of lukewarm water and mix gently. Put mixture in an empty spray bottle.3 Lightly mist the stain and wait at least two minutes before cleaning.4 Working from the outside of the stain inward, lightly scrub the stained area, rinsing your cloth often as you clean.5 Rinse thoroughly to remove all soap residue and blot dry with a fresh cloth.6 Allow the area to dry completely. If necessary, repeat #3-6 until fabric is clean and stain is removed.
Oil Based Stains <i>(i.e. Butter, Oil, Pizza, Chicken Wings, Mustard)</i>	Blot stain lightly, apply cornstarch as an absorbent to cover the stain. Wait at least 3 minutes and remove cornstarch. Proceed to #2-6.
Coloring Stains <i>(i.e. Crayons, Ink, Markers).</i>	Spray stain with isopropyl alcohol and wait at least 3 minutes. Proceed to #2-6.

We recommend spot cleaning stains first prior to washing Breathe fabrics. When laundering, wash in cold water with an enzyme-based detergent like Tide and drying on the lowest heat setting.
