

Encore®

Milliken's Premium Curtain Fabric

Milliken™

Overview

A unique fabric from Milliken & Company specifically designed for stage, theatre, and specialty events.

Features & Benefits

- Flame Resistance
- No Moisture Problem
- Maximum Opacity
- Travels Easily
- Easy Care & Cleaning

Flame Resistance

Encore's built in flame resistance meets the highest levels of safety, making it an ideal candidate for school auditoriums and public spaces. Encore's durable flame resistance meets the NFPA 701 standards and eliminates the cost of retreating.

No Moisture Problem

Encore is perfect for spaces in high humidity or auditoriums without constant climate control. Encore's polyester fibers are not effected by changes in humidity. As a result, you will have fewer curtain height adjustments, no white salt spots, and no early replacement due to dry rot.

Maximum Opacity

Encore's unique construction offers maximum opacity and great light absorption properties.

Travels Easily

Encore's wrinkle resistance makes it ideal for shipping the fabric or for traveling shows. Encore curtains can be stored in manageable, less bulky containers without worrying about wrinkles!

Easy Care & Cleaning

Stains can be wiped away easily with a damp sponge without water spotting. Encore may be washed with cold water without affecting the flame resistance of the fabric.

Available Forms

Encore® is available in two constructions: 15oz and 22oz.

Encore® 15 oz. Velour

This fabric drapes beautifully and has the highest opacity of any fabric of its weight.

Encore® 22 oz. Velour

This heavier version has a rich, full look, complete opacity and great light absorption properties making it a superior choice for front curtains.

If replacing or installing new curtains that will revitalize your auditorium or update your space, consider Encore® and assure yourself a standing ovation! Call your theatrical supplier or stage curtain manufacturer, or local distributor for more details and a full selection of colors.
